

## Invention Inventor

- Single page React native app
- Basic CSS only – I will tweak after app is working
- Use a placeholder for logo
- User clicks “Invent Something!” and 3 random words are displayed, and the blurb under the logo changes to a random saying
  - **Important:**
    - CSS animation [like this should be used](#) ([related article can be found here](#))
    - URL should change so it can be bookmarked or shared
    - Browser history should be updated so the user can click “back” to view a previously generated combination
- The button verbiage should change to “Invent Something Better!”
- There are “reaction emoji icons” on the bottom that show the number of people who have clicked on each
- Users can click an emoji icon to record their reaction, which is added to the count. After they click it, highlight it and disable the remaining buttons
- Users can click a “share” button
